

Accessing and Setting up root password

By default linux system does not give access the root user for security reason. Thats why we need to set the root user password to get the super user privileges using su command .

1st step: First become the root in the terminal -

method 1: `$sudo passwd`

Method 2: `$sudo -i`

`# password:`

Give the user password of current user.

Step2:

Access the root in the terminal using the given new password

`$su`

`Password:`

Step3:

Now confirm that you are root user

`#whoami`

Root
